Satellite Session #2 –
2017 International Workshop on New Frontiers in Convergence Science and Technology

Hiroshi HIRATA (Prof), Graduate School of Information Science and Technology

On 24 November 2017, a satellite session between Graduate School of Convergence Science and Technology (GSCST), Seoul National University (SNU) and Graduate School of Information Science and Technology (IST), Hokkaido University (HU) for the joint symposium was held at the GSCST Bldg., SNU. This session welcomed four faculties from IST at a SNU Campus. Before the satellite session, the HU participants visited the GSCST Dean Sang Eun KIM, and the IST Vice Dean Akihiro MURAYAMA showed his appreciation for the joint symposium. Dean Kim replied that he expected collaborative research and exchange induced by the visit.

The satellite session had thirty-minute presentations by the four HU faculties and five SNU faculties. Divided by three sessions, each speaker delivered his presentations in a session which was close to his own research fields: Session 1 – Biomedical Measurements, Session 2 – ICT and Session 3 – Nanotechnology. The satellite session participants included ten faculties and about thirty graduate students from SNU. GSCST at SNU has put priorities on nanotechnology, ICT and biotechnology. After the presentations, considering a new specific proposal by the GSCST side in order to proceed research cooperation, they exchanged opinions about student exchange and collaborative research. The session was closed with a promise to meet again at HU next year.
