## Hokkaido University

## Admission Policy

Hokkaido University is one of Japan's leading research-intensive universities, with departments ranging from the sciences to the humanities. Established in 1876 as Sapporo Agricultural College, it later became one of Japan's seven prestigious Imperial universities and is now a leading national university. During its long history, Hokkaido University has cultivated academic autonomy and freedom based on four basic philosophies relating to education and research: frontier spirit, global perspectives, all-round education, and practical learning.

Guided by these philosophies, the university's mission is to serve as a center where knowledge is created, disseminated and applied in the new century, thereby contributing to the development of human welfare, science, culture and society through education and research.

The university strives to offer an undergraduate program that inspires students to participate in society as global citizens, to acquire the academic and communication skills that will give them a solid foundation in their professional lives, and to study their fields of expertise from a broad academic perspective. The university aims to produce graduates capable of exercising sound judgment and leadership as exemplary citizens possessing high-level, internationally recognized academic credentials. In addition, the university nurtures students so that they may take leading roles as professionals in their fields and actively promote academic creativity.

Since its foundation, Hokkaido University has built upon its tradition and history and recruited talented students from throughout Japan and the rest of the world. We use an advanced selection system to seek out students who have the academic ability required to pursue an undergraduate education, such as basic knowledge and skills, mathematical ability, linguistic ability, depth of understanding, and comprehension skills. We also strive to recruit students with the qualities needed to pursue studies at the university level and beyond, such as problem-solving skills, creativity, a sense of ethics, flexible thinking, communication ability, the ability to think theoretically, leadership skills, integrity, and the desire to learn.
