

Increasing Coverage of Cervical Screening in Japan

The global strategy to eliminate cervical cancer envisages a world where cervical cancer is eliminated as a public health problem by 2099. As part of the global elimination strategy, 70% of women should be screened with a highly sensitive test at least twice in a lifetime. Screening coverage is between 30-40% in Japan and Primary HPV testing is not recommended. In this Webinar with examples from successful screening programmes overseas, we look at possible strategies to increase cervical screening coverage in Japan such as nurse-led screening and HPV self-sampling.

Date & Time

March 26th 2022: 18:00-20:00 JST

1. From Screening to Colposcopy- The Role of Nurses in the UK Cervical Screening Programme

Dr. Breda Anthony Nurse Consultant, Royal Infirmary Edinburgh

2. HPV Self-sampling for Cervical Screening: A Global Overview

Dr. Sharon J. B. Hanley Senior Lecturer, Hokkaido University Centre for Environmental and Health Sciences

3. Program Rose: A Revolutionary Strategy in Cervical Screening

Professor Yin Ling Woo Gynaecological Oncologist, University of Malaya

Panel Discussion with speakers and invited guests:

Chair : Asst. Prof. Eriko Kobayashi, Toyama Prefectural University

Professor Sachiko Suzuki, Saitama Prefectural University

Dr. Tomoko Saotome, Louis Pasteur Center for Medical Research,
